These Installation Instructions are provided as a guide for assembling WireCrafters RapidGuard™II partition system. Due to varying job site conditions and infinite layout possibilities, there is no "recommended" or standard way to install the product. **Common sense and proper safety measures must be used during installation.** The product may be unstable during installation; adequate temporary bracing should be used until the layout is fully assembled with all fasteners and anchors properly tightened. Depending on site and layout conditions, permanent field bracing to building structure may be necessary. The addition of field bracing is the responsibility of and shall be done at the installer's or owner's discretion and expense. Installation problems arising from job site conditions should be referred to a professional installer. Refer product assembly questions to WireCrafters.

TOOLS RECOMMENDED

Chalk line & marker	Drill with adjustable clutch and 3/8" nut driver	(2) Step ladders
Tape Measure	Hammer Drill with 3/8" masonry bit	(2) C clamps or Vise-Grip® type clamps
Level	(2) 1/2" open-end wrenches and/or	#1 & #2 Phillips Screw Driver
Hacksaw	(2) 1/2" deep socket ratchets	9/16" deep socket or 9/16" open-end wrench
5/32" Allen Wrench	5/16" open-end wrench	3/16" Steel drill bit

SELF DRILLING SCREW INSTALLATION RECOMMENDATIONS

When installing self-drilling screws, use a standard variable speed screw gun equipped with an adjustable clutch or depth locating nose piece. Take care not to over tighten or strip, set drill accordingly. **DO NOT USE IMPACT TYPE GUN WHEN INSTALLING SELF DRILLING SCREWS.** Securely clamp component parts in place before attaching with self-drilling screws.

INSTALLER TIPS

1. The installation will be best accomplished with a one or two-person crew.
2. Before starting, review all installation instructions pertinent to your layout (i.e. panels, doors, etc.)
3. "Face Side" of the partition is the outside. "Inside" of the partition has one leg of the panel frame pointing in. Panel fastener hardware will be on the inside of the partition.
4. Panels install vertically between posts.
5. Identify all posts and panels by part number. If possible, stage parts where they will be installed.
6. Special size panels have sticker tags on the angle and are referenced on the drawing.
7. Make sure all posts are installed plumb (vertically perpendicular to the floor). Shims (not provided) may be necessary.
8. Use a 5 1/4" spacer block (not provided) to support the far end of a panel during setup.
9. Begin the installation process at a building wall, end or corner of the layout.
10. Gauge hinge door opening width by installing a header angle.
11. Gauge slide door opening by door width (e.g. 48" between posts for 4' wide slide door). When necessary, slide door openings may be narrowed to adjust the length of an adjacent run.
12. Standard hinge and slide doors are universal and may be installed left or right hand.
13. The installer should touch up all nicks, marks, and scratches with touch up paint provided.
